GO FASTER, HIGHER, HARDER

GO FASTER, FURTHER, HIGHER!

In sports like in life, it's about going the extra mile. For those aiming to go faster, higher, and harder, there is the Liebaert Performance Technology. This cutting-edge technology was built to increase physical performance by reducing lactic-acid build-up in the muscles. It uses body heat to relieve muscle fatigue and discomfort. As such, this technology will be your preferred choice for any sports apparel looking to increase both performance and comfort.

BENEFITS OF THE PERFORMANCE TECHNOLOGY

INCREASES THE **OXYGEN** LEVELS IN THE BLOOD

REDUCES LACTIC-ACID BUILD UP IN **MUSCLES**

ACCELERATES MUSCLE RECOVERY

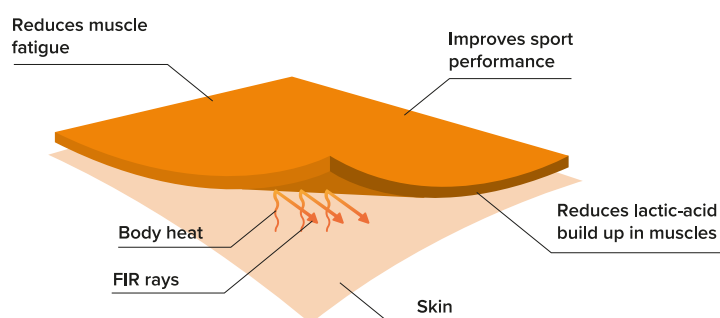

IMPROVES SPORT PERFORMANCE

DURABLE AND **LONG LASTING**

HOW DOES IT WORK?

The technology uses a special 6.6 nylon yarn with a built-in mineral additive which **absorbs the heat energy generated by the human body** during physical activity, before emitting it back to the body in the form of far infrared rays (FIR). As they are reflected back to the muscles, these infrared rays cause a deep and gentle heating by **stimulating the blood circulation** right beneath the skin surface. The advantages are myriad: the heat helps **increase the oxygen levels in the blood, reduces lactic acid build-up** in the muscles, invigorates and **energises skin and muscles, and relieves muscle fatigue** during physical activities.

**The following technology can be applied to all qualities upon request*
