THE ULTIMATE SENSATION OF COOLNESS

THE ULTIMATE SENSATION OF COOLNESS

In high-level sports, the tiniest detail can determine the outcome. Then imagine a fabric finish that regulates body heat, accelerating the exchange of thermal energy between body and textile. While redundant heat is being expelled through the fibre mesh, the wearer is instantly aware of its cooling sensation. Getting the most out of a workout while keeping your body in its comfort zone has never been easier.

BENEFITS OF OUR TEMPERATURE REGULATING TECHNOLOGY

PROVIDES INSTANT COOLING

REDUCES BODY TEMPERATURE

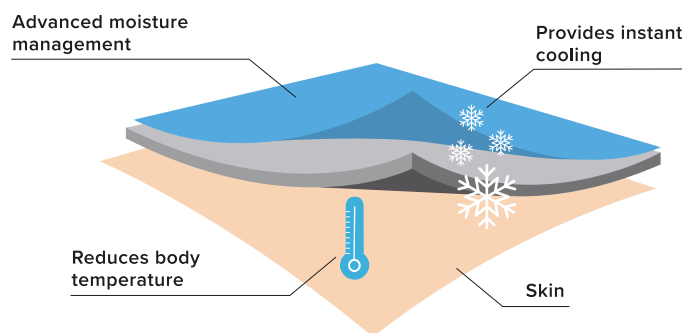

ADVANCED MOISTURE MANAGEMENT

DURABLE AND LONG-LASTING

HOW DOES IT WORK?

The science in this finish is pure advanced technology. The fabric's capacity to absorb heat is combined with high-tech moisture management, which gives the skin the sensation of a quick cooling effect. On the one hand, the high thermal effusivity reroutes any heat away from the skin as soon as it manifests itself, using Phase Change Materials to balance the body's heat production and the loss of it. Moreover, the reactive capsules that are used, cling to the fibre without having to use any binder.

**The following technology can be applied to all qualities upon request*
